EDUCATION

Master of Computer Science, New York University - GPA: 3.78/4.0 Sep 2025 – May 2027

Bachelor of Computer Science, Nirma University - GPA: 8.51/10.0 Oct 2020 – May 2024

EXPERIENCE

Data Analytics Intern May 2026 – Aug 2026
NFP, an Aon Company *New York, NY*

- Built a hybrid NLP classification pipeline combining sentence embeddings, logistic regression, and Gemma4 to classify 11,000+ construction claims with 99% accuracy, identifying recurring accident patterns for loss analysis.
- Developed a Random Forest model on monthly loan data to predict delinquency risk with 91% accuracy, supporting proactive identification of at-risk accounts and reserve estimation.
- Engineered a semantic clustering pipeline using HDBSCAN to group claims by accident similarity, enabling underwriters to analyze recurring losses, compare claim patterns, and identify opportunities for improved risk assessment.

Founding Engineer Jan 2026 – May 2026
LitmusAI *New York, NY*

- Developed an open-source Python SDK for behavioral evaluation of LLM applications, integrating trace instrumentation, configurable test suites, and automated regression analysis across prompt and model versions.
- Developed persona-driven adversarial simulation workflows covering 10+ attack and failure scenarios and onboarded 5 early users to evaluate their LLM applications by customizing evaluation pipelines.

Machine Learning Engineer Jul 2024 – Jul 2025
Blueinfy Solutions *Ahmedabad, India*

- Led development of an automated LLM red-teaming framework using Llama-3.1 and Phi-3.5 Mini to simulate adversarial prompts and evaluate chatbot vulnerabilities, reducing manual review effort by 40%.
- Built synthetic adversarial data generation pipelines covering OWASP Top 10 LLM vulnerabilities, integrating automated prompt generation, vulnerability assessment, and 5-point severity grading to streamline AI security testing.
- Built a multimodal web security analysis pipeline using locally deployed Gemma 3 27B to process website text and screenshots, and detect sensitive data exposure across 10,000+ domains.

Machine Learning Engineer Jan 2024 – May 2024
NightHack Technologies *Bangalore, India*

- Built a multimodal AI music generation and recommendation system integrating facial embeddings, speech features, and textual sentiment, achieving 84% mood-classification accuracy among 50 users, reduced inference latency by 40%.
- Developed a custom OCR pipeline for handwritten text and checkmark detection, achieving 87% extraction accuracy through targeted augmentation and region-specific labeling.

PROJECTS

- **Multilingual Speech Translation Pipeline** Demo
  Built multilingual speech translation pipelines for Gujarati spiritual discourses across **8 languages**, serving **1.2M+ users in 190+ countries** using OpenAI Whisper and NVIDIA NeMo. Engineered multilingual data creation, speech-text alignment, and preprocessing workflows to improve translation quality and preserve speaker voice.
- **Multimodal RAG Search Engine** App
  Built a multimodal and multilingual search engine for long-form spiritual content, integrating dense+sparse retrieval, vector indexing, and LLM-based reranking. Engineered timestamp-level retrieval and contextual search workflows, serving **10k+ monthly users** with **93% internal relevance score** and **sub-1.5s median latency**.

SKILLS

Languages Python, SQL, C++
AI / LLM Systems PyTorch, Transformers, TensorFlow, Scikit Learn, vllm, HuggingFace, RAG, LLM Evaluation
Infrastructure Docker, AWS, GCP, GitHub Actions, CUDA
